

— CHOOSING A TOOL

# Buying an AI notes tool? Ask these *five questions*.

The answers separate a time-saver from a liability. ↓

# Where does the *audio* go?

Is the consultation recorded, transcribed and stored — and on whose cloud?

Nosht

NO RECORDING

# Do you review *before it saves?*

“AI-assisted” means you check and sign. “AI-generated” means it writes, you hope.

# What patient *data is held?*

Identifiers and audio, or clinical descriptors only?

# Built for *UK dentistry?*

A generic medical scribe isn't a dental record.  
Alignment matters.

# Could you defend it *to the GDC?*

Contemporaneous, attributable and complete — or a tidy paragraph that misses things?

Nosht

# Five questions. *One honest answer.*

Nosht is built to pass all five.
